EDUCATION

Thapar Institute of Engineering and Technology
Bachelor of Engineering, Computer Engineering | CGPA: 7.62/10
Kartar Public School, Barnoti
High School (PCM) | 94.6%

Patiala, India
Aug 2023 – May 2027
Kathua, Jammu and Kashmir
Apr 2021 – Apr 2023

TECHNICAL SKILLS

Python, SQL, Machine Learning, Deep Learning, LangChain, HuggingFace, FastAPI, React, Git, Pandas, NumPy

PROJECTS

Mental Health Predictor App — Python, CatBoost, Scikit-learn, Streamlit, SHAP — [GitHub]
Implemented an interpretable classification system to identify individuals needing clinical mental health support.

- Developed an **interpretable ML classification system** using CatBoost to predict the likelihood of requiring mental health treatment based on high-dimensional survey features.
- Engineered a robust preprocessing pipeline including **Cramér's V correlation analysis** for feature selection and Chi-square tests to ensure the statistical significance of categorical variables.
- Integrated **model explainability** using SHAP (SHapley Additive exPlanations) values to surface top contributing factors for each prediction, increasing clinical trust and transparency.
- Deployed a responsive **Streamlit web application** featuring interactive data dashboards and real-time inference, successfully serving live predictions to over **200+ test users**.

Bike Rental System (DBMS Project) — MySQL, SQL, PL/SQL, Database Design — [GitHub]
Designed a scalable relational database architecture to manage the lifecycle of shared mobility services.

- Architected a normalized relational database schema (optimized to **BCNF**) to manage users, bike inventory, and multi-location rental transactions efficiently.
- Developed automated **PL/SQL triggers** for real-time total cost calculation and **concurrency control** to prevent asset double-booking during peak hours.
- Implemented modular **stored procedures** to handle complex business logic, including automated status updates, booking cancellations, and location-based availability queries.
- Designed a comprehensive **Entity-Relationship (ER) model** with relational mapping for 10+ entities, ensuring high data integrity and minimal redundancy.

EXPERIENCE

GS Tech Technology Pvt Ltd Jun 2026 – Present
Intern - Web Developer (Remote) Bengaluru, Karnataka

- Engineered responsive web applications and optimized dynamic user interfaces to improve client-side navigation and core system responsiveness.
- Collaborated asynchronously with cross-functional development teams to deploy scalable features, integrating frontend layouts with backend APIs and internal web services.
- Refactored legacy codebases and troubleshooted technical issues, reducing page load latencies and ensuring data integrity across web platforms.

CERTIFICATIONS

NVIDIA: Fundamentals of Deep Learning Feb 2026
Whizlabs — Coursera [Credential] Course Certificate

- Built and trained deep learning models from scratch, implementing fundamental techniques like convolutional neural networks (CNNs) for computer vision tasks.

- Explored standard model optimization strategies, data augmentation, and transfer learning workflows to solve real-world dataset problems.

Generative AI with Large Language Models Specialization Apr 2026
DeepLearning.AI & AWS — Coursera [Credential] 3-Course Series

- Gained hands-on experience with the typical GenAI lifecycle, including scoping, selecting, and fine-tuning Large Language Models (LLMs) for specific use cases.
